## Aims of the project

ABCClean intends to improve prevention and safety in the workplace adding an environmental scope to the traditional training of occupational health. The project raises awareness about the exposure risks of asbestos offering a transversal view of the procedures – detection, removal, demolition, waste management and legal procedures and obligations – to be implemented by both, employers and employees.

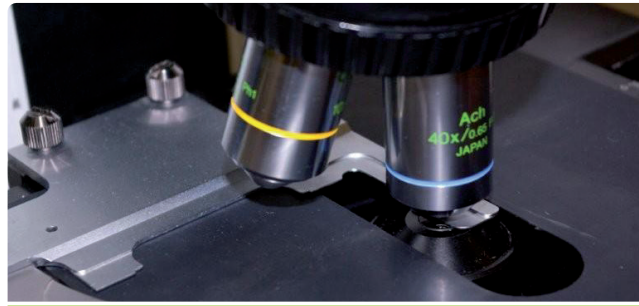

## Targets

The coordinators of Safety and Health and Environmental Management in Construction sector SME's.

All the operatives under the supervision and assistance of the H & S coordinators, to which the environmental knowledge will be transferred.

The training institutions, qualification bodies, certification agencies and citizens' organisations, to raise general awareness on Asbestos related risks.

Any company working with this material from other sectors.

## Methodology

ABCClean project is based on four steps:

- 1.** The establishment of a certified professional prepared for the dealing and disposal of asbestos, whom will be a reference point for both employers of employees in a construction company.
- 2.** The use of training tools with a visual and practical approach, so that knowledge can be easily acquired and then transferred to the actual field work. Training materials will be validated by a minimum of 100 trained employees of SME's.
- 3.** The creation of a toolbox of resources to support the ABCClean trainer in the workplace.
- 4.** The setting up of a collaboration between countries at different stages of awareness and actions about asbestos, in order to elaborate a common training strategy transferable to other countries and open to new inputs.

## The ABCClean project will provide

A level 4 Qualification Standard describing the main competences and training needs of the ABCClean representative in the construction sector.

An e-learning course, combining theoretical and practical training materials (case studies, best practices, videos and checklists).

A set of memo cards aimed at providing visual and interactive training.

## The ABCClean e-learning course will be

Easily accessible anytime from a PC.

User-friendly with engaging interactive activities, case studies, and videos.

Supported by a useful Safer Work Set which is a toolkit to help inform others workers about the dangers of asbestos.
